SKILLS

Languages Python, C/C++, Git, Arduino, Java, PHP, HTML, CSS

PROJECTS

Asthmatic conditions Detector - Managed to create asthma detector which is like watch, which detects the change in humidity and temperature and then notify the asthmatic person, and makes him to evacuate the conditions using IOT technology and messaging technology; It was a group work and we managed to become the leading team.

Trading site – currently working on forex Site which will automatically analyze the News, as they come using AI and then give corresponding effects on the currency. Additionally, gives the session and also act as the journal and a community of traders.

Power Learn Project – Am currently under sponsorship thanks to PLP, and working quite a lot of projects please feel free to navigate to my github: <https://github.com/Wizard-hash2>

Database connector using Java – This allows java connectivity git link: https://github.com/Wizard-hash2/Database_Connect_apache.
